

## What is a model?

A model is a representation of a real-world system or concept to make predictions about their behaviour.

Ex- Traffic Model, Medical Model etc.

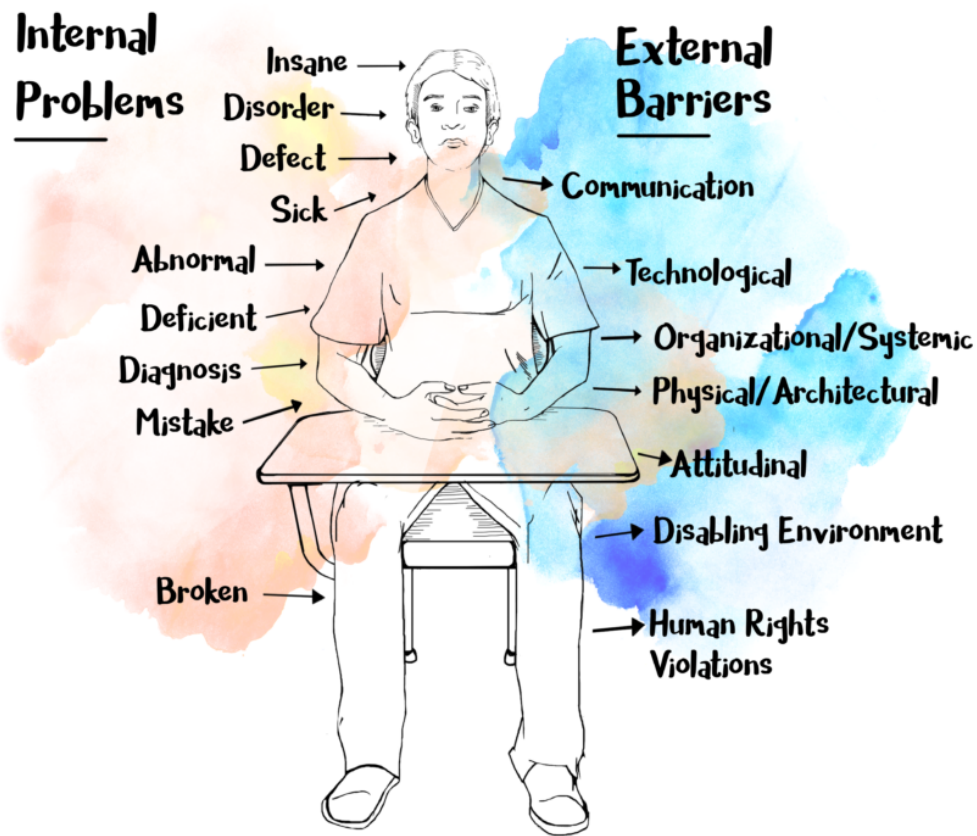

### Traffic Signal Model-

The traffic helps in optimizing traffic signal timing and planning for road infrastructure improvements.

### Model of Disability-

- Non-disabled bodies are seen as “normal”, healthy, better, and good.
- Disability is seen as something abnormal, bad, problematic, and something that needs to be fixed, cured, removed, hidden, or minimized.

### strategy-

A strategy is a plan for how to achieve a goal. It is a high-level plan that outlines the steps that need to be taken to achieve the goal.

“The model and the strategy work together to help the company achieve its goals. The model provides the company with information about the future, and the strategy provides the company plan for how to achieve its goals in the future.”
